

Trailers for storage & deployment of temporary power cable

When planning your site specific needs for disaster response, portable auxillary power is a key element to insure your facility is ready for any emergency.

Insuring that your personnel has the tools to get the power from the generator to the plant is vital. How will they get the right power cable to the right location? How will you store the cable to maintain your readiness?

Coalmont offers the solution for both your deployment and storage needs. As the supplier of power cable trailers for the SAFER FLEX response centers in Tennessee and Arizona, we have proven products for the specific needs of a disaster response program.

In addition to the standard designs supplied for the Regional Response Centers, Coalmont can customize a trailer for your specific facility needs. Our in-house customization and fabrication, we can design and build a trailer with the number of cable spools, length of cables, cable type, and footprint required for your specific challenge.

Contact us today to get a proposal for your trailer.

Plug into emergency power

Temporary Power Cable Trailer

SAFER 480 CABLE TRAILER

Coalmont offers the basic 480V trailer we supplied for the SAFER response Centers in Phoenix and Memphis. The standard design provides storage on 20 reels for cables up to 100' long. The original trailers were shipped with TPC color coded connectors.

SAFER 4160 CABLE TRAILER

Coalmont offers the 4160 cable trailer we supplied for the SAFER Response Centers in Phoenix and Memphis. The standard design provides high reel capacity of multiple lengths of cable with lug connectors.

CUSTOM CONFIGURATIONS

Coalmont can work with you to modify an existing design or create a new design to meet your site specific needs. We fabricate the entire trailer in house. That gives us the flexibility to build reels of almost any capacity, change the number of reel or add storage. All of Coalmont trailers have durable powder coated finishes. The color and graphics can be customized for your program.

SPOOL & UNSPOOL POWER ASSIST

Most designs can incorporate our power assist spooling and unspooling design. Power assisted spool winding makes the process of winding and unwinding large amounts of cable less physically demanding and saves time.
